

Cyres Colposcopy Features

Cyres Colposcopy contains a huge number of reports. The number grows every year as clinics ask for new functionality

These include:

- KC65
All parts, with built in checks to ensure they correlate and exception reporting to enable any anomalies to be investigated and corrected before submission
- QA Data Sets & Benchmarks
Aggregated statistics to generate actual figures against targets and produce instant analysis showing any areas that may need addressing
- Case breakdowns
Analysis and breakdown for BSCCP submission with merge output to pre-built templates
- Diagnostic Analysis
Reports on inadequate biopsy rates as well as consultants abilities to predict high grade lesions
- Treatment Analysis
Analysis of treatments at first visit showing all those with and without CIN
- Follow Up Reporting
Analysis of treatment failures, both cytological and histological, after a user defined follow period to ensure appropriate and adequate follow up
- Failsafe
Allowing staff to chase up missing histology results

And many more...

Cyres Colposcopy Features (cont)

Cyres Colposcopy also has an ad-hoc report wizard to enable you to build and save your own reports. This alone has saved endless hours of time every week at installed clinics as one-off requests for information and figures can be answered instantly.

If you would like more information, an onsite presentation or reference site details please contact us today.
