

Cyres Cytology Features

Cyres Cytology contains a huge number of reports. The number grows every year as Labs ask for new functionality

The content of all Cyres products is driven by users. The number of reports in Cyres Cytology has more than doubled since the product was launched. These include:

- Turnarounds
 - no longer from Date Received to Date Authorised in terms of weeks but from Date Taken to Date Authorised in terms of days
- Smear biopsy correlations
 - collating histology outcome against referral grades
- KC61
 - all parts, including Part C, with formatted output to Word and Excel for easy submission
- Data audits - gaps / anomalies etc
 - to enable data to be checked and cleaned before submissions to the QARC are made
- APV / PPV
 - to enable checks on over calling or under calling to be carried out, with drill down to view missed cases
- Age & Source distributions
 - with options to display results as graphs to enable instant analysis
- Grade Profiles
 - both detailed and compressed
- Sensitivities & Specificities
 - at both Lab and Staff levels

Cyres Cytology Features (cont)

- Workload distributions
at both Lab and Staff levels
- Failsafe routines
that enable letters to be set up and generated and summary reports to be run
- Smear Taker Audits
at a variety of levels enabling letters to be generated right down to individual smear taker level with a breakdown of reasons for inadequacy

And many, many more...

Cyres Cytology also offers a build-your-own report function. Using this it is possible to create and save new reports with data summarised and filtered as required along with all the standard drill-down functionality that comes throughout the product.
