

Cyres sixW Features

sixW is the query engine that drives all Cyres products - it allows you to ask the questions Who? What? How? Why? When? and Where?

sixW is a query builder and report writer designed and built by Cyres. It has been used to produce all the reporting products offered by Cyres.

It is easy to plug data into sixW and analyse it - which makes writing new reports and developing new products quick and easy. sixW:

- converts disparate raw data into organizational intelligence
- delivers reports to the desktops of key players and decision makers
- is fully interactive allowing users to select options and apply filters
- offers any number of levels of drill-down enabling the data behind summary figures to be investigated
- is easy to use requiring virtually no training
- runs through MS Windows or via a browser over the web
- allows data from multiple sources to be integrated
- presents results in a highly visual way using dials, charts etc

sixW drives the National Health Service Cervical Screening Programme (NHSCSP) reporting as Cyres Cytology and Cyres Colposcopy are based around the sixW reporting engine.

It has also been used in a wide range of other countries, industries and markets - from Denmark and Ireland, from Training to Construction.

If you have a need to integrate data from multiple sources, analyse it and present it back to users in a summary format then contact us today to find out how we can help.
